We power your life.

Share, charge and more

Work with a true all-rounder

Ever more companies are moving away from the concept of fixed seating. Desk sharing, shared workplaces and open concepts with workplace booking systems are becoming increasingly popular in offices and in co-working areas.

The shared workplaces should nevertheless offer all users the best working conditions at all times. In the best case, without a confusing range of plugs or cables and without additional devices such as docking stations.

The Mini Port Replicator bundles everything together that a laptop needs and integrates it clearly and neatly into one connection panel – including internet connection, power supply and screen connection. As a Custom Module, it can be integrated into a connection panel such as DESK 2, PIX, CONI or STEP. Once installed, the user simply needs a USB C cable to take advantage of all the benefits of the all-in-one solution.

This keeps the work area tidy and free of cables.

Everything available, everywhere

The Mini Port Replicator as a part of a connection panel

Plan in the Mini Port Replicator as a part of your connection panel – BACHMANN has the right solution for every situation. The following pages illustrate the Mini Port Replicator integrated into a connection panel in applications in various locations.

Whether you are using it for desk sharing in open-plan offices, in conference rooms at the company headquarters or for seating in the lounge or multi-use areas – take inspiration from the options available!

Desk Sharing

A new day,
a new workplace

Fixed seating is becoming a thing of the past. Many companies are now abandoning this concept and switching to desk sharing and workplace booking systems instead.

But hybrid work concepts in companies aside, desk sharing is also popular everywhere else: in co-working spaces, in temporary work situations for freelancers and in workplaces in hotel lobbies, universities and libraries.

DESK 2 connection panel

DESK 2 is a multi-functional power strip that can be equipped with various communication modules.

- Design solution for living and working environments
- User-oriented 35° orientation
- Covered cable routing to the edge

Mini Port Replicator

In desk sharing applications, the Mini Port Replicator simplifies the utilisation of all technical capabilities of the workplace and makes all technical features available to the user.

- Creates standard workplaces
- Ensures cable-free desks
- Enables a clean-desk policy

ZG1 Monitor Arm

The ZG1 Monitor Arm not only features impressive ergonomics and convenient positioning.

- Mounted from above
- High load capacity of up to 11 kg
- Flexible positioning

STEP connection panel

The power strip is ideal for creating a flexible supply of energy and data to workplaces, in partition systems and raised floors.

- Modularity
- Versatile applications
- Installation connection system as standard

POWER FRAME connection panel

Combining compact dimensions with high-quality timeless design, POWER FRAME opens up virtually unlimited application options.

- Compact dimensions
- Timeless design
- Versatile in application

Mini Port Replicator

The Mini Port Replicator makes sure that numerous users can give presentations and share information whenever needed.

- Saves time in meetings
- Works with various end devices
- Enables the presentation to be the focus needed.

Scenario 2

Pod

Come in and get started

There is also an issue in conference rooms: there is a large number of users, different end devices and meeting types in which not much time is available for installing and setting up devices and software. A high level of flexibility is needed.

Pods are small meeting rooms, but they need to be just as flexible as large conference rooms.

Scenario 3

Moveable Walls

focused and
concentrated

Work cubicles and moveable walls are
a common sight in open-plan offices and
in multi-space working environments.
They provide a retreat and create
a focused working atmosphere.

Mini Port Replicator

The Mini Port Replicator creates
a clear overview and clarity in
cubicles and on seating through its
simple operation, so that the focus
can be on the work.

- Saves space in cubicles

- Preserves the aesthetics of
  seating

- Prevents tangled cables in
  high-visibility locations

PIX connection panel

The stylish PIX range is a collection of sophisticated, round socket and connector units that can be used in many different ways.

- Replaceable, coloured decorative rings

- With optional swivel-mounted lid

- Simple mounting from above; subsequent mounting also possible
